AIR METHODS

DON'T WANT TO LOSE WHAT GOT US HERE

Having more business than your current facility can handle is a good thing, right?

THE CHALLENGE

This business was rapidly expanding and outgrowing its current facilities. The informal communication style that worked well in their small, shared space was becoming less effective as they considered moving into separate buildings. The concern was that moving to separate buildings would disrupt the instant communication they had previously enjoyed, and relying solely on phone calls could be inefficient.

THE SOLUTION

Informacast paging is the robust solution that we offered. With its diverse range of endpoints, we were able to address multiple communication challenges. Two-way IP speakers allowed for seamless communication without requiring the recipient to answer the phone, making them ideal for departments like shipping and receiving and those waiting for parts. Additionally, the endpoints offered input capabilities, enabling integration with other systems. For example, we connected fuel tank level sensors to trigger alerts when levels were low. We also implemented similar alerts for used oil tanks, using displays, app notifications, and email to indicate when emptying was necessary.

Visit gmi.com to see how GMI can implement Informacast paging solutions to keep your teams connected, no matter the distance. From two-way IP speakers to automated alerts, streamline your operations and enhance communication across all locations. **Contact us today** to explore custom solutions for your business needs.
